The caption of Figure 5 should be:

Wind/WAVES type II burst starting around 14 MHz (\sim 12:05 UT, 2017 September 6) and continuing down to \sim 100 kHz (09:00 UT, 2017 September 7). The end time is marked by the short vertical line with its length indicating the bandwidth (70–130 kHz). The horizontal error bars signify the end time uncertainty. The vertical dashed line marks the SGRE end (06:28 UT, September 7); the horizontal dashed line represents the gamma-ray background. The shock arrival time at 1 au is labeled “SH” (Gopalswamy et al. 2018).
